Technical meeting and networking buffet
Douglas Hotel 43-45 Market Street, AB11 5EL
Wednesday 24th March 2010 6.30pm to 8.30pm

**Production Optimisation: How can we get all the
oil we should be getting? Drawing on case
histories from North Sea, Middle East and South
America**

Sandy Williams ALP Limited

Our assets are mature and depend on artificial lift to keep our wells producing. Many of our fields have to be operated at low cost, but are we getting the production we should be getting from our wells? This presentation will discuss the application of artificial lift, review common problems that result in lost production, discuss current contracting models identifying how we could have better alignment of objectives with our suppliers and present case histories to illustrate the key points. Ultimately a low cost producer is interested in a lower cost / barrel of production, this presentation will focus on how we can increase the barrels side of the ratio
